

Energy Solutions

Achieve Your Energy Goals Today

The energy landscape is rapidly changing, and we're here to help you navigate it. We're proud to offer a comprehensive range of energy-related products — from lighting to solar energy solutions — as well as services designed to help you save on energy costs, operate sustainably, and much more.

Markets We Serve

Commercial Construction | Residential Construction | Data Centers
Food & Beverage | Utilities | Healthcare | Retail | Education
Industrial & Manufacturing | Oil & Gas | Hospitality | Government

Energy Efficiency

Identify and implement measures to reduce energy losses caused by inefficiencies, often focusing on optimizing the grid's performance.

Upgrades & Maintenance

Provide resources to repair, replace, and improve existing infrastructure to support growing energy demands and technological advancements, such as renewable energy integration.

Local & National Compliance Assistance

Ensure that electrical distribution systems comply with national safety, environmental, and regulatory standards.

Microgrid Implementation

Integrate smart technologies to enhance monitoring, control, and communication within distribution networks, improving overall grid reliability and flexibility.

Coordination & Collaboration

Work with utilities, government agencies, and other stakeholders to coordinate energy distribution efforts, tackle challenges, and promote sustainable practices.

What We Offer

Leverage the expertise and experience of our Energy Team to achieve your energy and sustainability goals!

Services

Energy Audits

Get a detailed analysis of a building's energy use and performance to help identify energy-saving and cost-saving opportunities. Included are a cost-benefit analysis for recommended improvements, an environmental impact report, and a detailed audit report that outlines all findings with estimated costs and savings. Energy audits can range in cost and complexity depending on your needs.

Lighting Retrofit & Design

Lighting retrofits often reduce energy consumption, lower maintenance costs, and improve lighting quality and function. This can involve replacing old bulbs with energy-efficient options, installing advanced lighting controls, and enhancing lighting design to improve light distribution and intensity.

Power Quality Assessment

Identify issues that could disrupt the smooth operation of electrical equipment or cause power system inefficiencies. Power quality is assessed based on voltage stability, frequency stability, harmonics, voltage sags/swells, transients, and flicker.

Renewable Energy

The renewables market is complex and ever-changing, and our team can help you make sense of it. Our specialists have expertise in solar and wind energy, stored energy/generators, microgrids, EV charging, and more.

Ask us about the energy solutions services offered by our national supplier partners!

Product Categories

- Climate Control
- Consumption Monitoring
- Production Monitoring
- Demand Response
- Electrical Modular Enclosures
- Energy Procurement
- EV Charging Stations

- Generators/Battery Backup/Portable Power
- LED Hazardous Lighting
- LED Lighting
- Lighting Control & Design
- Peak Demand Solutions
- Process Control
- Smart Breakers

- Soft Starters & VFDs
- Solar Energy Products
- Stored Energy
- Sub Metering
- Transformers
- Voltage & Amp Detectors
- Wiring Devices, Receptacles & Fittings

STONEWAY
ELECTRIC SUPPLY

Powered by Crescent™

Expert Support You Can Trust

Our **experienced team** is here to help—from product selection to troubleshooting. With specialists in a variety of fields, you'll always have access to **expert guidance** tailored to your specific needs.

Contact your sales rep, visit your local branch, go online at stoneway.com.
