FRIEDHELM LOH GROUP

Rittal – The System.

Faster – better – everywhere.

Dear Sir or Madam,

Here at the Friedhelm Loh Group, one of our corporate principles is:

“We view our customers as partners who determine the success of the company”.

Our goal is to solve your challenges. Our products and services are uncompromising in terms of quality, technical execution, range and availability. Our dedicated employees around the globe are fully committed to this principle on a daily basis.

With us as market leaders on your side, you benefit from our innovative strength.

We can make you faster and better.

As well as launching a slew of new products, we have also consistently refined the unique Rittal value chain. Act now to rationalise your planning with engineering software and a data portal from Eplan, and use “Rittal – The System.” for fast, efficient generation of your power distribution systems and controllers.

Our software will help you to calculate climate control data and select the most appropriate cooling unit, and we now offer support with intelligent machine tools from Kiesling.

We are committed to making your processes more efficient in every respect, from A to Z.

Rittal is also unveiling another world first for your success – the standardised data centre RiMatrix S. True to our motto “Faster – better – everywhere.”, it eliminates the need for long planning and installation times. We can install a TÜV-tested data centre in a matter of weeks rather than months.

The Rittal Catalogue is here to help you compile products and corresponding system accessories quickly and successfully.

Thank you for your invaluable feedback and suggestions, and we look forward to developing more innovations together.

Wishing you every success

Yours

New interior installation rail

- Retrospective interior installation without machining
- Allows time-saving mounting on the sides, base and roof areas
- Variable with two rows of TS 8 system punchings, creates additional mounting space
- TS 8 system punchings allow TS 8 accessories to be used
- Automatic potential equalisation
- May still be fitted after installation of the mounting plates
- Mounting option for door-operated switch and door stay

Conductive mounting plate

- Simple one-person assembly even with free-standing enclosures, via a slot in the mounting plate
- Zinc-plated surface finish for direct contact between assemblies and optimum EMC properties

Interchangeable gland plate

- Sheet steel for simple machining, supplied loose
- Integrated, automatic potential equalisation by mounting screws
- Other gland plates with metal or plastic knock-outs for simple, fast cable entry are available as accessories

Optimum surface protection

Triple surface treatment provides optimum protection against corrosion. Maximum quality is achieved in three stages:

- 1st phase: Nanoceramic primer
- 2nd phase: Electrophoretic dipcoat-priming
- 3rd phase: Textured powder-coating

- 1 Metal with triple surface treatment (Rittal standard) following a 180-hour salt spray mist test
- 2 Metal powder-coated only following a 180-hour salt spray mist test

Integral perforated door strips

- For universal door installations
- For secure cable routing from the door to the enclosure

Interchangeable door hinge

- The door hinge is easily swapped over in single-door enclosures
- No machining required, since the holes are pre-integrated and sealed with stoppers

Practical wall mounting bracket

- For fast, time-saving attachment to the enclosure from the outside
- Simply insert the expandable dowel into the enclosure hole from the outside, and screw-fasten the wall bracket from the outside. In this way, the pre-configured enclosure may be transported to the installation site and the wall bracket secured without opening the enclosure.

Improved mounting plate

- Simple, one-person assembly
- The mounting plate slides easily on slide rails with plastic skids, slide rails may also be used for interior installation
- Easy positioning of the mounting plate on a 25 mm pitch pattern

New Flex-Block base/plinth system

- Fast assembly by simply clipping together the base/plinth components
- The enclosure is easily transported, both when empty and fully configured, by removing the base/plinth trim panel
- Space-saving cable management in the base/plinth means more space for enclosure configuration

Comprehensive potential equalisation

- All panels and gland plates in standard enclosures may be conductively connected via assembly components

Baying systems TS 8

Versatile baying options

- Around corners, forwards, backwards, to the left or right or even upwards; the baying options are unlimited
- Baying connection technology for fast assembly and stable, permanent baying
- Bayed TS 8 enclosures may be transported

Symmetrical frame

- Symmetrical layout supports access from all sides
- Identical system accessories in the width and depth for interior installation
- Accessible from all sides, due to hinged side panels

Universal interior installation

¹⁾ Number of lamina x lamina width x lamina thickness

²⁾ The conductor temperature of the laminated copper bar is derived by adding the ambient temperature and the temperature increase together

Example:

3565.005 carrying 180 A, i.e. the temperature increases by 30 K. At an ambient temperature of 35°C this produces a resultant conductor temperature of 35°C + 30 K = 65°C

Supply includes:

- PTC heater
- Quick-connection terminal
- Assembly parts

Note:

- For precise temperature control inside the enclosure, we recommend the enclosure internal thermostat or the digital enclosure internal temperature display and thermostat.

- In order to prevent condensation on assemblies, a hygrostat is recommended to regulate heating.
- In larger enclosures, even heat distribution is best achieved by installing several low-output heaters.
- The installation of heaters is generally advisable, in order to prevent condensation.

Metal filter

Particularly when cooling units are used in dusty and oily environments, it is advisable to use washable metal filters.

If air or steam condenses on the metal surfaces, any particles present will adhere to the metal, and can easily be washed out with water or grease-dissolving solvents.

Material:

- Aluminium
- Thickness: 10 mm

Note:

- 2 metal filters are required for 3334.660, 3335.880 and 3335.890

Quick-change frame

for roof-mounted cooling units

The quick-change frame is more than just an alternate frame. Together with the seal, the lower part of the frame is screw-fastened to the enclosure. In this way, it is possible to install and remove the connector-ready cooling unit with the upper part of the alternate frame previously mounted on the cooling unit with quick-release fasteners. During servicing work, this means shorter assembly times and hence minimised downtime. What is more, the quick-change frame offers effective protection against the ingress of oil into the enclosure in oily atmospheres, thanks to its integral drainage trough.

PSM busbars

PSM busbars + PSM socket modules

PSM busbars

The modular system facilitates basic configuration of the racks, thanks to a vertical support rail with single-/3-phase infeed.

The various socket modules to supply the active components may be snap-fitted into the support rail. This can even be done whilst the system is operational, because the support section is shock hazard-protected.

PSM socket modules

The various modules, earthing pins, IEC320 etc. may be inserted into the support rail in any combination. This is easily achieved, even by non-electricians, thanks to the shock-hazard-protected plug & play system.

Approvals:

Available on the Internet

Photo shows a configuration example with equipment not included in the scope of supply

Technical specifications/benefits:

- Each socket module picks off a phase on the support rail, either from infeed **A** or from the redundant infeed **B**, depending on the direction of connection.
- Single-/3-phase construction with a maximum current of 2 x (3 x 16 A).
- 3-phase redundant infeed supported
- The redundant circuit is completely separate from the 3 phases of the support rail
- Modules may be retrofitted whilst operational
- Modules may be equipped with integral overcurrent protection, so that only the affected module is deactivated in the event of an excessively high current; the other modules remain operational
- Overvoltage protection may be integrated into the supply line
- Various modules also available with current measurement and switchable outputs

Power System Module

PCU Power Control Unit

Power Control Unit (PCU)

PSM modules, active

Socket modules, IP-compatible via CMC III, 1 U

There are various PCU/module versions available for installation in the 482.6 mm (19") level of an IT rack and for use with PSM busbars. For each PCU/PSM module there is a choice of 6 or 8 slots with different pin patterns. Each output slot may be switched individually or in groups via the CMC III. Alarm limits may be configured via the integral 2-digit, red 7-segment display and the latest aggregate current can be read during normal operation. Following a power failure, the individual slots are switched on sequentially (i.e. individually, one after the other) in order to avoid current spikes.

For the versions with individual current measurement, 2 LEDs for each outgoing slot indicate when individual limits are exceeded. For each slot, individual current limits may be defined via the CMC III. For operation, a control voltage of 24 V (DC)/approx. 0.2 A is required for each PCU/module, which may be provided via the CMC III. If used without the CMC III, an external power pack 24 V (DC) is required. For each power pack, up to 4 PCU/PSM modules may be connected. In such cases, the network/switch functions cannot be used.

Operate PCU and PSM module with CMC III (network function – switchable outputs)

For connection to the CMC III, in addition to the PU, the CAN bus unit for 2 channels is also required.

Up to 4 PCU/PSM modules of the same type may then be connected to each channel. In such cases, the current and alarm messages may be forwarded to DCIM software (such as RiZone) via the network (SNMP) and slots switched via remote access.

Description of functions:

- 2-digit local LED 7-segment current display
 - Legibility rotates according to the installation position
 - LED display per slot/overload detection (only with individual current measurement)
- Measuring and monitoring of the current per module and outgoing slot
 - Adjustable min/max limits
 - Measurement range: 0 – 16 A
- Alarm notifications via a flashing display
- Selective activation on voltage return
- In conjunction with the CMC III, the 6/8 individual current outlets may be activated and deactivated individually via HTTP and SNMP
- Remote administration of the power supply, editing and monitoring of remote limits, SNMP trap messages in case of alarm
- User administration via CMC III

Technical specifications:

- Rated operating voltage: 250 V
- Rated current: 16 A
- Switching load: 4000 VA per slot
- Operating temperature +5°C...+45°C
- Ambient humidity 50 – 95% rel. humidity, non-condensing

Dimensions:

- Width: 465 mm (19")
- Height: 44.5 mm (1 U)
- Depth: Refer to order table

Preset current limits for PCU/PSM modules with individual current measurement (may be edited via CMC III):

- LED green: 0 – 7 A
- LED amber: 7 – 13 A
- LED red: over 13 A

For upgrading existing installations or for measuring individual 16 A/32 A equipment, the PSM 1 U MID measurement modules may be used. These are readily integrated into the 482.6 mm (19") level or into the zero-U space of the rack, and connected using suitable connection cables. These measurement modules have an MID-compliant active energy meter and are therefore suitable for energy billing purposes. MID stands for "Measurement Instruments Directive" and regulates 10 types of measurement equipment based on EU Directive 2004/22/EC. MID-approved equipment is authorised for use throughout the EU.

Benefits:

- For 16 A and 32 A phase current
- Easy to assemble
- Billable MID measurement units
- CAN bus for connection to CMC III system
- Extensive management and monitoring functions (via CMC III)
- High-MTBF and measurement accuracy of +/-1%
- Energy-efficient electric design – minimal inherent power consumption
- 1 U, 482.6 mm (19") sheet steel enclosure, for flexible mounting

Measurement functions:

- Voltage (V), current (A), frequency (Hz)
- Active power (kW), active energy (kWh), apparent power (kVA), apparent energy (kVAh)
- Power factor (cos phi)
- Zero conductor measurement/load imbalance detection
- Measurement per phase or infeed
- Measurement accuracy +/-1% (kWh) to IEC 50 430-1
- MID certification of the active energy meter, suitable for energy billing purposes

Socket strips

Socket strips

in an aluminium duct

The socket strips in the aluminium duct are available in various lengths with different functional elements. Special attention has been devoted to practical, universal fastening:

Variable attachment facilities have been created with an angle bracket which may be inserted in four positions. Hence, for example, the 482 mm long socket strip may optionally be mounted on 482.6 mm (19") mounting angles, the 482.6 mm (19") mounting frame, the enclosure frame, or in the rear section of the wall-mounted distributor. Without additional mounting accessories, the socket strip may be inserted into all sections with a 25 mm pitch pattern. This makes selection much easier, as well as providing additional flexibility and saving on warehousing. Provision has also been made for cable routing of the infeed, and when mounting in the 482.6 mm (19") section there is adequate space to route the infeed between the socket strip and the mounting angle without kinks.

The arrangement of the IEC 320 sockets at a 45° angle allows unrestricted use of angular connectors.

Technical specifications:

Earthing-pin socket strips:

- Connector type F (CEE 7/4)
- Rated operating voltage: 250 V

Slimline door element with viewing window and sliding door. Stable roof elements in a composite metal with a high level of light permeability. Where required, safety glass may also be used.

Applications:

- Depending on the application, aisle containment may be used with CRAC systems or LCP Inline as hot or cold aisle containment.

Benefits:

- Increased energy efficiency and performance capability of climate control.
- Superior output density is facilitated, thanks to targeted cold air supply.
- Easily installed and retrofitted, as it is fully compatible with the TS 8 enclosure system.
- An inexpensive way to boost the performance of your existing plant, lengthening the investment cycle until a replacement needs to be purchased.

Functions:

Aisle containment is a combination of door and roof components which facilitate consistent separation of the hot and cold air in the data centre. Such separation is pivotal to saving energy and increasing the efficiency of the available climate control technology.

The fan mounting plate may be retro-fitted in all DK-TS network enclosures from above. The plate is mounted at the front of the enclosure, whilst the rear section is left free for cable entry. A rubber cable clamp strip is supplied loose for optional sealing at the rear.

The following combinations are also possible:

- Solid roof plate raised with 20 or 50 mm roof spacers
- Roof plate for cable entry raised with 20 or 50 mm roof spacers
- Vented roof plate for cable entry

In conjunction with the large swing frame, usage is only possible from an enclosure depth of 800 mm, in conjunction with a roof plate for cable entry from 1000 mm.

Fan cross member

For upgrading existing DK-TS applications.

Specifically for installing in one-piece perforated sheet steel doors

Given the growing packaging density in data communications and network enclosures, active, direct ventilation of the enclosure is essential. The fan cross member, which is attached to the tubular door frame of the rear or front door, supports horizontal air routing via the servers and therefore facilitates faster heat dissipation from active components.

Technical specifications:

- Standard cross member with two fans
- Air throughput, unimpeded airflow 600 m³/h
- By adding two fan expansion kits, the air throughput is increased to 1200 m³/h
- The direction of air flow is easily reversed by rotating the fan
- Several cross members may be positioned in a cascade arrangement
- Simple mounting on the tubular door frame

Supply includes:

- Fully wired ready for connection
- Connection cable 2.5 m
- Assembly parts

Note:

- Only for mounting on the tubular door frame

Accessories:

- Fan expansion kit, see page 438

IT management software

RiZone Appliance Standard

RiZone is supplied as a hardware or software appliance.

As a hardware appliance, RiZone is supplied with global support, installed on a powerful 1 U server. The software appliance is available as a virtual server which can easily be used on existing hardware in the data centre.

Note:

- Both appliances support communication with Rittal devices and devices from third-party manufacturers via an integral MIB browser

Also required:

- RiZone Appliance IP node licence according to the number of IP nodes available.

- Separate, hermetically sealed internal and external circuits
 - Dust and flue gases are unable to ingress
 - The internal and external unit are connected to one another via refrigerant lines and control cables and shielded for fire protection
 - Air routing in the Micro Data Centre is horizontal. Modified air baffle plates ensure targeted air routing. By separating the "cold side" from the "hot side", air short-circuits are avoided, and the efficiency of cooling is enhanced.
 - Suitable for use in rooms with climate control in the building or adequate ventilation, and low or no noise level requirements. The evaporator coil is fastened to the side panel on the inside of the Micro Data Centre, and the external device on the service door.

- The internal circuit of the cooling unit is secured to the side panel inside the Micro Data Centre. The external unit is positioned outside of the building. The internal and external units are connected to one another via refrigerant lines and control cables.
- The hot air from the servers is drawn in at the rear, and the cooled air is expelled in front of the 482.6 mm (19") level. The waste heat is routed directly to the outside. As a result, room ventilation or air-conditioning is not necessary.

Fire alarm and extinguisher system DET-AC/EFD Plus

System accessories Page 507 Network/server enclosures Page 90

Benefits:

- Early fire detection
- Automatic extinguishing
 - Innovative extinguisher gas NOVEC 1230
 - Eco-friendly
 - Uncritical for IT components
- 482.6 mm (19") rack mount with just 1 U

Colour:

- RAL 7035

DET-AC Plus

Compact fire alarm and active extinguisher system with smoke extraction system, built into one height unit. The detection system is identical to that used in the EFD Plus system. Fire extinguishing with the extinguisher gas NOVEC 1230 is automatically activated when a main alarm is triggered. With the extinguisher gas supply provided, a volume of up to 3 m³ can be extinguished. The collective fault signal and the alarms may be forwarded to the CMC.

DET-AC Plus slave

In conjunction with the DET-AC Plus slave system, up to five bayed enclosures may be extinguished. In addition to the DET-AC Plus unit, each additional enclosure requires a DET-AC Plus slave unit, which contains the extinguisher gas for one enclosure. The pipework from the DET-AC Plus system is laid in all enclosures to facilitate detection.

EFD Plus

Compact early fire detection system with active smoke extraction system.

The integral fan continuously extracts the air from the enclosure, and passes it over two smoke detectors. The first smoke detector is extremely sensitive and triggers a pre-alarm. The second smoke detector triggers the main alarm.

Photo shows a configuration example with equipment not included in the scope of supply.

Security rooms

The basic protection room

The basic protection room provides a high-quality, system-tested solution. The basic protection room is an optimum, modular room-within-a-room solution for protecting IT/infrastructure components such as extinguisher systems, uninterruptible power supplies and climate control. The flexible modular system means that it can be extended whilst the IT systems are operational.

Benefits:

- System-tested protection levels
- Multi-functional risk coverage
- Dust- and noise-reduced installation
- Dismantling and reassembly plus extendibility = investment security
- May be adapted for use in other room systems, such as the High Availability room

Criterion	Standards	
System testing	 Testing the following standards as a complete system or construction	
Fire protection	 ECB-S certification to EN 1047-2, 50 K temperature increase and 85% rel. humidity for up to 24 hours (reheating period), flame impingement time 60 minutes	
	50 K temperature increase and 85% rel. humidity without reheating period, flame impingement time 30 minutes	
	F 120 to DIN 4102 F 90 to DIN 4102	
Corrosive fire gases	Acrid gas-tightness based on DIN 18 095	
Falling debris	Impact test at 200 kg	
Water	IP X6 to IEC 60 529 Protection from standing water	
Dust	IP 5X to IEC 60 529	
Unauthorised access	WK IV to DIN V ENV 1630, door system only	
	WK III to DIN V ENV 1630, or DIN V 18 103 (ET2)	
	WK II to DIN V ENV 1630	
Explosion	Detonation test	
EMC	Protection from high-frequency irradiation and radiation	

System-tested structures are tested as a complete construction, comprising the cell structure and built-in modules such as doors, cable shields or ventilation units. By contrast, generic component testing only refers to individual parts.

Conventional construction methods refer to room structures made of plasterboard, concrete and other standard construction materials which do not offer sufficient protection for data centre applications. Conventional construction methods are generally unsuitable for use as a fire wall and are therefore only subjected to component testing.

System accessories Page 507 **Network/server enclosures** Page 90

The High Availability room

The High Availability room offers maximum physical protection for data centres and IT system locations. The system was certified by ESSA (European Security Systems Association) to ECB-S regulations. This certification confirms that the High Availability room meets the requirements of EN 1047-2 without restriction. Moreover, the construction of the security room is subject to continuous quality monitoring by an independent agent.

Benefits:

- System-tested High Availability protection
- Multi-functional risk coverage
- Dust- and noise-reduced installation
- Dismantling and reassembly plus extendibility = investment security
- ECB-S certification
- Independent quality monitoring
- May be adapted for use in other room systems, such as the basic protection room

Design – Calculation – Verification

The application-dependent design of power distribution components and climate control measures is a key element in the engineering process of an automation plant.

Rittal offers perfect tools to assist you:

“Rittal Power Engineering” allows you to easily configure standard-compliant Ri4Power low-voltage switchgear and busbar systems – with integral design certificate!

One key criterion of efficient plant planning is optimum design of the climate control system.

Here, our “Therm” product provides precise, fast calculation of your climate control requirements and helps you to design suitable climate control measures – also available as an App for iPhones and Androids! The CAD data of the components provide the basis for efficient planning. This data can be retrieved online via the Rittal website with our “RiCAD-3D” software, and worldwide via Partcommunity.

Greater efficiency in plant design

Regardless of which CAD system you use, RiCAD 3D effectively supports the efficiency and productivity of your plant design work.

It includes both 2D and 3D drawings for virtually all Rittal products, together with an extensive range of system accessories.

Three options for retrieving the CAD data

- Offline: RiCAD 3D as a database on your hard drive
- Online: Request data via the product pages on the Rittal website
- Online: Retrieve data via the Web platform "PARTcommunity"

Benefits for users of RiCAD 3D

- All CAD data may be transferred into any commercially available CAD system, due to the intelligent, native 2D/3D multiCAD-compatible format.
- The accurately detailed and validated drawings allow design drawings to be created by users with optimum planning confidence, in a fraction of the time taken for conventional design, by simply remodelling.
- Thanks to the freely selectable level of detail in CAD models, these may be represented in a greatly simplified format, enabling huge performance enhancements among users.

Fast online access to original data in all commercially available CAD formats with direct downloading facility available at: www.rittal.com

Save time

- Fast assembly by simply clipping together the base/plinth components
- Easily bayed with tool-free baying clip
- The enclosure is easily transported, both in its empty and configured state, by removing the base/plinth trim panel

Easy to assemble

- Toolless assembly of all base/plinth components
- Toolless assembly of accessories, e.g. baying and levelling feet
- Symmetrical in enclosure widths and depths
- With the 200 mm high Flex-Block, combinations of 100 and 200 mm high trim panels may be used

Large mounting area

- Space-saving cable management in the base/plinth means more space for enclosure configuration
- Installation using punched rail – Clip into position from the outside or inside
- Flexible configuration: Punched rail with 25 mm pitch pattern of holes

Base/plinth

Flex-Block base/plinth system

The Rittal base/plinth system

Flex-Block

Freely combinable base/plinth system for virtually any application. Because the corner pieces and trim panels are packaged separately, it may be tailored to any application.

The enclosure load rests on the corner pieces, so that the trim panels can be attached or removed at any time by using clips. The base/plinth trim panels are symmetrical and are readily exchanged in the width and depth. This creates unprecedented flexibility and great savings potential with base/plinth configuration.

Modular base/plinth diversity

Regardless of the enclosure depth:
The base/plinth components at the front and rear, pre-configured with corner pieces, are always the same for the chosen width.
Only the side trim panels are selected according to the enclosure depth and the required base/plinth configuration. The modular concept produces exceptional advantages in terms of cost and function.

Mounting on the enclosure is conveniently carried out from the outside. The base/plinth interior offers diverse opportunities for cable management mounting levels.

Fewer parts, more opportunities, lower purchasing, storage and assembly costs – this is the winning formula behind the modular base/plinth system.

The following table shows five possible solutions using three bayed base/plinths in 200 mm height from the wide range of options available, together with the potential savings with trim panels compared with the previous 200 mm base/plinth system each with two trim panels of 100 mm height at the sides.

Pressure relief stoppers

Especially when enclosures are exposed to changing climatic conditions (e.g. with outdoor siting), condensation may form in sealed enclosures due to pressure differences. The integral sealing membrane largely prevents such pressure differences and hence condensation; additionally, it also prevents the ingress of moisture from the outside. Installed in vertical surfaces to protect against dirt.

The divider panel and module plate system

More options:

The cut-outs of a divider panel are individually equipped with module plates for 16-pole or 24-pole connectors, with module plates for cable entry and with solid module plates.

Faster assembly:

Usually only some of the total number of connector cut-outs are used. Thanks to the new divider panel technique, the cut-outs do not need to be covered individually. The solid module plate is used instead. The benefit: Less plates, less screws, less assembly work.

Divider panel

for module plates TS

With cut-outs for the installation of module plates for connectors or for cable entry, and also for the entry of busbar systems and other installed equipment. All-round, double fold for stability and to hold the seal. Thanks to the symmetry of the enclosure frame, divider panels may also be fitted at the rear, dimensions permitting. For mounting on the outer mounting level. This leaves the inner level free for further population.

Material:

- Sheet steel, 2 mm

Surface finish:

- Zinc-plated

Supply includes:

- Assembly parts and multi-tooth screws
- M5 x 12 mm for mounting the module plates.

Notes on the transportation of bayed enclosures

Individual enclosures may be safely transported using the eyebolts included with the supply. For symmetrical loads, the following maximum permissible loads apply:
 at 45° cable pull angle 4,800 N,
 at 60° cable pull angle 6,400 N,
 at 90° cable pull angle 13,600 N.

Note:

- The eyebolts must be aligned in the direction of the cable pull

For the enclosure combination with angular baying brackets, quick-fit baying clamps and combination angles shown here, the load capacity with a cable pull angle of 60° is as follows:
 for the left-hand enclosure 7,000 N,
 for the middle enclosure 14,000 N,
 for the right-hand enclosure 7,000 N.

The cable pull angle between the roof plate and the cable has a significant influence on the total permissible load.

The cable pull angle must not be less than 45°, and ideally not less than 60°.

Wiring system

for Ri4Power with internal compartmentalisation

The wiring system facilitates vertical and horizontal cable routing in conjunction with internal Form 2-4 separation.

For vertical cable routing, pre-punched cut-outs are provided in the mounting brackets for compartment dividers, which can easily be knocked out and used to install a vertical wiring channel.

Horizontal cable routing occurs behind the front trim panels. This entails fitting a wiring trim panel which is suitable for accommodating a wiring channel while at the same time concealing the busbar system.

Interior installation

Rail systems

Rails for interior installation

for AE

For mounting in the enclosure, no machining required. Suitable for all-round mounting on the sides, base and roof areas.

Variable with 2 rows of system punchings, creates additional mounting space e.g. for

- TS punched section with mounting flange
- Enclosure lights
- Door-operated switch
- Door stay
- Cable conduit holder

Benefits:

- Only one screw for attaching the rail inside the enclosure
- Larger mounting space than with the previous rail, thanks to separate adaptor for door-operated switches (included with the supply)
- Compatibility with TS 8 system accessories
- Enclosure protection category is retained (no machining required)
- Automatic potential equalisation
- May be retrospectively installed even with the mounting plate in situ. Suitable for installation via gland plates

Material:

- Sheet steel

Surface finish:

- Zinc-plated

Note:

Other mounting options:

- Mounting plates, locatable, 8612.400, see page 616
- Mounting plates, screw-fastening, large, 8612.410, see page 616
- Mounting plates, screw-fastening, small, 4532.000, see page 617

Three examples from a wide range of possibilities

The diagrams show three TS examples for the positioning of cable entry plates instead of segments of the three-piece gland plates supplied as standard. This facilitates positioning to fit the mounting plate. Thanks to the enclosure symmetry, where dimensions permit, cable entry plates may also be inserted in the enclosure depth, right and left, analogous to the gland plates.

Section for cable entry, rear for TS, SE, CM, TP

Unlike the section for cable entry, centre, the rear section is mounted directly onto the base opening. In this way, when installing the mounting plate in the rearmost position (TS) or with CM, the cables may be routed directly on a cable clamping rail with no large radii. In conjunction with the cable clamp rail, optimum adjustment between the cable entry and mounting plate can be achieved.

Installation bracket TS

for L-shaped mounting angles in TS, 482.6 mm (19")

For upgrading existing DK-TS applications.

Installation in enclosure width 800 mm

The installation brackets are screw-fastened to the enclosure frame in the enclosure width. The mounting angle is attached to the depth stay at the top and bottom. The brackets ensure optimum clearance at the sides for cable routing. For partial enclosure configuration, the installation brackets may be attached to the TS punched sections with mounting flanges 17 x 73 mm, on the outer attachment level of the enclosure frame. Fully depth-variable attachment is facilitated by the attachment slots.

The 3-phase coating procedure

Coating procedure	Technical properties	Technical specifications	
Degreasing, nanoceramic pretreatment, rinsing	Used as corrosion protection and to improve paint adhesion.	Nanoceramic conversion layer	
Anodic dipcoat priming	Even layer formation on all surfaces, edges and in cavities, which produces a high level of corrosion protection even at the assembly stage. The primer is readily overpainted and free from heavy metals, chromate and silicone.	Erichsen cupping test to DIN EN ISO 1520	≥ 4 mm
		Buchholz hardness to DIN EN ISO 2815	≥ 80
		Cross cutting to DIN EN ISO 2409	Gt 0
Stove enamelling			
Textured powder-coating	Powder-coating is distinguished by a high level of mechanical resistance, excellent corrosion protection, good resistance to chemicals and temperature, and its facility for decontamination. The powder coating is readily overpainted and is free from heavy metals, chromate and silicone.	Erichsen cupping test to DIN EN ISO 1520	≥ 3.5 mm
		Buchholz hardness to DIN EN ISO 2815	≥ 80
		Cross cutting to DIN EN ISO 2409	Gt 0
		Salt spray test to DIN EN ISO 9227 NSS	Test period: 168 hrs
		Condensate test to DIN EN ISO 6270-2 CH	Test period: 500 hrs
		Condensate test to DIN EN ISO 6270-2 AHT	Test period: 20 cycles
Stove enamelling			

The coating is resistant to:

- Mineral oils
- Lubricants
- Machine emulsions
- Alcohol-based solvents (briefly, e.g. during cleaning)
- Weak acids and alkalines

Primer or powder coating suitable for overpainting

After careful cleaning of the surface, the standard coating may be overpainted with:

- DD gloss paints
- Single and dual-component gloss paints
- Car repair paints
- Powder paints
- Water-based paints

If in doubt, perform a compatibility test. Always follow the paint manufacturer's instructions.
When overpainting, take care not to exceed 180°C and a baking time of 15 minutes.

Outdoor use of enclosures

In order to guarantee satisfactory long-term function of enclosures in outdoor use, the relevant environmental factors must be taken into account.

These include:

- UV radiation, the corrosive action of air pollution, rain, icing, snow, wind or other factors in special climatic conditions.

Condensation inside the enclosure

Condensation must be prevented by means of appropriate measures, e.g. by venting or heating the enclosure.

Protection category

The enclosure may be exposed to extreme weather conditions during outdoor use.

Long periods of rain, snow, ice, high winds and temperature fluctuations place particularly high demands on the enclosure sealing. The protection category IP X3 as envisaged for external weather conditions in DIN VDE 0100, part 737, point 5.2 is often insufficient to provide permanent protection for electrical equipment.

Protection categories to IEC 60 529 (EN 60 529)

The IP protection category is characterised by 2 numbers.

Example of a protection category, e.g. IP 43:

Code letters	
IP

Degrees of protection for protection against contact and foreign bodies: First numeral			Degrees of protection for protection against water: Second numeral		
First numeral	Degree of protection		Second numeral	Degree of protection	
	Description	Explanation		Description	Explanation
1	Protected against solid foreign objects with a diameter of 50 mm and greater	The object probe, a sphere 50 mm in diameter, must not penetrate fully ¹⁾ .	1	Protected against water drops	Vertically falling water drops must not cause any harmful effects.
2	Protected against solid foreign objects with a diameter of 12.5 mm and greater	The object probe, a sphere 12.5 mm in diameter, must not penetrate fully ¹⁾ . The articulated test finger may penetrate up to its length of 80 mm, but adequate distance from hazardous parts must be adhered to.	2	Protected against vertically falling water drops when the enclosure is tilted up to 15°	Vertically falling drops must not have any harmful effects when the enclosure is tilted up to 15° on either side of the vertical.
3	Protected against solid foreign objects with a diameter of 2.5 mm and greater	The object probe, a sphere 2.5 mm in diameter, must not penetrate at all ¹⁾ .	3	Protected against sprayed water	Water sprayed at an angle of up to 60° on either side of the vertical shall have no harmful effects.
4	Protected against solid foreign objects with a diameter of 1.0 mm and greater	The object probe, a sphere 1.0 mm in diameter, must not penetrate at all ¹⁾ .	4	Protected against splashed water	Water splashed on the enclosure from any direction shall have no harmful effects.
5	Dust-proof	The ingress of dust is not fully prevented, but dust may not enter to such an extent as to impair satisfactory operation of the device or safety.	5	Protected against water jets	Water directed at the enclosure from any direction in a jet shall have no harmful effects.
6	Dust-tight	No ingress of dust at a partial vacuum of 20 mbar inside the enclosure.	6	Protected against powerful water jets	Water directed at the enclosure from any direction in a powerful jet shall have no harmful effects.
			7	Protected against temporary immersion in water	Water must not ingress to such an extent as to cause harmful effects when the enclosure is temporarily immersed in water under standardised pressure and time conditions.
			8	Protected against continuous immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions to be agreed between the manufacturer and the user. However, the conditions must be more difficult than for numeral 7.
			9	Water with high-pressure/steam-jet cleaning	Water directed at the enclosure from every direction under greatly increased pressure must not have any adverse effects.

¹⁾ The full diameter of the object probe must not pass through an opening of the enclosure

Technical information

NEMA

The **N**ational **E**lectrical **M**anufacturers **A**ssociation (NEMA) is a standards organisation in Washington, USA, which publishes a number of technical standards but does not test or certify products itself.

The following NEMA classification outlines the protection of individuals from accidental contact with equipment and the protection of an enclosure from external factors.

Further information on protection categories may be found on the Internet at: www.rittal.com

UL/NEMA Type	Intended use and description
1	Enclosures for use predominantly indoors Protection against the penetration of foreign bodies
3	Enclosures for use predominantly outdoors Protection from rain, hail, dust, icing and the damage caused by icing
3R	Enclosures for use predominantly outdoors Protection from rain, hail, icing and the damage caused by icing
3S	Enclosures for use predominantly outdoors Protection from rain, hail and dust External mechanisms remain usable despite being coated in ice
4	Enclosures for indoor or outdoor use Protection against rain, foreign bodies, splashed water and hosed water and against damage caused by icing on the exterior of the enclosure
4X	Enclosures for indoor or outdoor use Protection against rain, foreign bodies, splashed water and hosed water and against damage caused by icing on the exterior of the enclosure Increased protection from corrosion
12, 12K	Enclosures for use predominantly indoors Protection against dust deposits, foreign bodies and non-corrosive dripping liquids
13	Enclosures for use predominantly indoors Protection against dust deposits, sprayed water, oil, and non-corrosive coolants

The UL/NEMA classifications are not directly comparable with IP protection categories, since both the test conditions and the evaluation of the test results are different

Approvals and permits

Product certifications and approvals are pivotal to the global acceptance of industrial products.

Rittal products meet the highest internationally recognised quality yardsticks. All components are subjected to the most stringent testing in accordance with international standards and regulations.

The consistently high product quality is ensured by a comprehensive quality management system. Regular production inspections by external test institutes also guarantee compliance with global standards.

A precise allocation of products to marks of conformity can be found on our product and service pages on the Internet.

Earthing

The PE conductor connection must be designed by the manufacturer of switchgear in accordance with the relevant VDE and/or local regulations.

The enclosure packs generally contain earthing materials (screws, nuts, washers). The assembly instructions contain recommendations on installing a protective earth.

The pre-assembled earth straps, available as accessories in various cross-sections and lengths, are intended to make assembly of a PE conductor easier.

Further information can be found in our technical documentation "PE conductor connection, current carrying capacity".
