# **UNISTRU**

## P5001

Notes:

- \* Load limited by spot weld shear.
- \*\* <sup>KL</sup>/<sub>r</sub> > 200
- 1. Above loads include the weight of the member. This weight must be deducted to arrive at the net allowable load the beam will support.
- 2. Long span beams should be supported in such a manner as to prevent rotation and twist.
- 3. Allowable uniformly distributed loads are listed for various simple spans, that is, a beam on two supports. If load is concentrated at the center of the span, multiply load from the table by 0.5 and corresponding deflection by 0.8.

## MATERIAL

Unistrut channels are accurately and carefully cold formed to size from low-carbon strip steel. All spot-welded combination members, except P1001T, are welded 3" (76 mm) maximum on center.
